

MAKE A DIFFERENCE

Five webinars focused on the diagnostic work-up in patients with recurrent angioedema including hereditary angioedema (HAE), therapy control and optimization.

The overall aim of this webinar series is to help to provide the optimal therapy to all patients with recurrent angioedema as early as possible, especially patients with HAE.

The webinars will cover strategies for achieving earlier diagnosis and lower rates of misdiagnoses, approaches for family screening in patients with HAE, the implementation of close-meshed therapy control, and guidance on how to continuously optimize therapy methods.

4TH DATE

JANUARY 19TH, 2022 - 5:00 pm CET

ACQUIRED C1-INH DEFICIENCY (AAE)

Introduction 5'

Markus Magerl, Germany
